Description

Seal 'N' Peel Liquid Masking WB5000

Seal 'N' Peel WB5000 is a water based, easily applied, strippable coating for the temporary protection of a range of non-porous surfaces. The dry coating can be readily peeled away from the big substrate to which it was applied within hours of application, leaving the surface in its original condition. Surfaces that Seal 'N' Peel can successfully protect include glass, powder coated surfaces, stainless steel, laminates etc. The unique formulation will provide effective and lasting protection from dust, dirt, paint, glue, mortar, plaster, staining and scratching. This revolutionary product can also be applied onto new multi-pane timber windows and doors and will adhere aggressively to the timber yet will peel away easily from the glass, saving time and money by eliminating the need for excessive masking and cutting in by hand. Application is typically by conventional or airless spray equipment (a brush or roller can be used for smaller areas). Removal of Seal 'N' Peel is easy. After scouring around the edges of the protected area with a blade simply peel the coating away as a sheet. Save yourself countless hours of tedious hand masking. Simply spray or brush on and peel off after use.

Specifications

- Colour White (when liquid), Clear (when dry)
- Number of Coats 2
- Coverage 2m²/L at 200 µm DFT
- Drying Time 1 hour at 25°C
- Clean up Water
