C4444K	MM410 (Standard Castors)	\$3,295.00

Description

Easy Access MM410 Mini Mobile Scaffold Tower

The MM410 mobile scaffold tower is the most popular mobile scaffold tower in its class. It consists of 2 full tiers and a half tier on the top as the guardrails. Frames are made from lightweight aluminium. The complete tower flat packs so well it can fit into the back of most station wagons.

Perfect for indoor and tight access areas. The Base unit fits through a standard doorway.

Very quick to erect with one person. No separate ladders required as the frame is a ladder for climbing up the tower internally.

Choose between standard castors (MM410) or adjustable castors (MM410A). We recommend adjustable castors for outdoor use to be able to adjust for uneven terrain to keep the tower level.

Features & Specifications

- Width 0.7m
- Length 1.7m
- Maximum platform height 3.7m
- Hatched access platforms
- Lightweight aluminium construction
